

DANGERS OF XYLITOL (also called “Birch Sugar”, “Wood Sugar” or “E967”)

by Liz Donovan for The American Kennel Club / December 16, 2015

A substance called Xylitol is making thousands of dogs sick and even causing death, affecting more pets now than ever before, and it is probably in your home right now.

Cases of Xylitol poisoning in dogs have increased dramatically in recent years. *The Wall Street Journal* reported, citing statistics from the Pet Poison Helpline, which received 10 times as many calls relating to Xylitol by November 2015 than in all of 2009.

“There are still a lot of dog owners who have never heard of “Xylitol”, Ahna Brutlag, associate director of veterinary services for the hot line told *The Wall Street Journal*, “nor do they understand that something this benign, an ordinary sweetener, could be so toxic to pets”!

Learn about this substance, why it’s dangerous to dogs, and what to do if your dog eats it.

What is Xylitol?

Xylitol is a sugar substitute most often associated with “sugar-free” chewing gum and mints, but it’s also found in some brands of peanut butter, toothpastes, certain medications, vitamins and many sugar-free products (chocolate, JELLO, yogurt, pudding), and even some household products such as baby wipes and lip balm. A comprehensive list of products is available from the AKC. VCA Hospitals reports that Xylitol is *100 time more toxic to dogs than chocolate*.

Why is Xylitol so dangerous?

According to Caroline Coile, *AKC Family Dog Nutrition & Health* columnist: “The dog pancreas confuses Xylitol with real sugar and releases insulin to store it. The insulin removes real sugar from the bloodstream and the dog can become weak, and have tremors and even seizures starting within 30 minutes of eating it”. Other symptoms of hypoglycemia include poor coordination and vomiting/diarrhea.

Liver failure (and death) can also result from Xylitol ingestion, and symptoms can take as much as eight hours to show up. A dog only needs to consume a very little amount of Xylitol to receive a deadly dose. As much as two pieces of gum can cause a problem in a small-breed dog.

How is Xylitol poisoning treated?

If you suspect your dog ate something with Xylitol in it, no matter how little it was, contact your veterinarian (or emergency veterinarian if off-hours) immediately!

PEANUT BUTTER / XYLITOL POISONING

“Because the amount of Xylitol in gum and other products varies so widely and because some manufacturers don’t report how much is in their product, it’s important to call your veterinarian as soon as possible if he ate something with Xylitol in it”, Coile says.

A good prognosis is dependent on how quickly the pet is treated. Your veterinarian may need to stabilize your pet’s blood sugar, give intravenous fluids, monitor your pet, and use other therapies to treat symptoms.

How can I protect my dog?

Read the ingredients: If you are offering your dog peanut butter, look for Xylitol, Birch Sugar, Wood Sugar or “E967” in the ingredients, as some brands, namely specialty brands, are using the sugar substitute to sweeten their product. Also, check the label on products with buzz words relating to sugar, such as “reduced sugar”, “Diabetic friendly”, “cavity-free”, or “No Sugar Added”, for example, as these also may contain Xylitol.

Keep gum, candies, mints and purses out of reach: Even if you don’t typically have these items in your home, be sure that guests visiting keep their purses out of the dog’s reach in case they are carrying Xylitol containing medications or products, such as gum, mints, or candies. Also be aware of *household products that contain Xylitol* and find alternatives or store them where your dog cannot reach them.

Be Prepared: Post the number to the Pet Poison Hotline (855-764-7661) as well as the number and address for you local emergency veterinarian in a place where all household members can see it. This is a good idea for all pet related emergencies. That way, if your dog eats Xylitol or another toxic substance, you’ll save precious minutes getting him treatment immediately.

NOTE - overseas manufacturers are now marketing Xylitol under different names, it can go by: “BIRCH SUGAR”, “WOOD SUGAR” or “E967”

These are often found in peanut butter, chewing gum and ice cream products!

By the way, Mc Donald’s now puts Xylitol in their ice cream - NEVER GIVE YOUR DOG ICE CREAM FROM Mc DONALD’S!
